This is the [Jekyll](#) source of the www.ruby-lang.org website.

How to Contribute?

You can contribute by reporting errors or suggesting improvements. Just open an issue or pull request.

This is a big project with many translations involved. Please help us stay on top of things by following our [guidelines for contributors](#).

Get It!

Bundler will take care of the dependencies, so unless you already have done so, you might need to install bundler with:

```
gem install bundler
```

Then clone the repository and install the dependencies:

```
git clone https://github.com/ruby/www.ruby-lang.org.git
cd www.ruby-lang.org/
bundle config set --local without production
bundle install
```

Make Changes

Making changes is easy: just locate the Markdown source of the page you want to improve, then make your changes or add content.

If you plan to submit a pull request or want to preview your changes on Heroku, you need to

- create a topic branch,
- commit your changes to this branch.

See the [project's wiki](#) for some guidelines on how your commits and PRs should look like.

Preview Your Changes

Preview Locally

Generate the website with

```
bundle exec rake build
```

Then start a local web server with

```
bundle exec rake serve
```

Open <http://localhost:4000/> in your browser to access the preview.

Note: The build of the site will take several minutes.

Alternatively, you can use Jekyll directly.

```
bundle exec jekyll serve --watch --future --incremental
```

If your draft uses future date, you may want to use `--future` option.

Preview on Heroku

In case a build is not possible on your local machine or you want to test your changes under production conditions you can also create a preview on Heroku.

- Sign up for [Heroku](#) if you do not have an account yet.
- Install the [Heroku Toolbelt](#).
- Unless you already have, `cd` into your local working copy of this repo.
- Create a preview app on Heroku using the custom buildpack:

```
heroku login
heroku create --buildpack https://github.com/ruby/heroku-buildpack-www-ruby-lang.git
```

- Push your feature branch:

```
git push heroku feature_branch:master
```

To create a preview of the master branch:

```
git push heroku master
```

Open the preview in your browser with `heroku open` or retrieve the preview URL using `heroku info` and open it in your browser.

Testing

Besides generating and previewing the site you can perform additional tests with these tasks:

```
bundle exec rake lint      # run linter on markdown files
bundle exec rake check:markup # check markup for all generated pages
bundle exec rake check:links # check for 404's (needs a running local server)
```

More Information

For more information see the [wiki](#).
