

rbenv - the Ruby version manager

rbenv is a version manager tool for the Ruby programming language on Unix-like systems. It is useful for switching between multiple Ruby versions on the same machine and for ensuring that each project you are working on always runs on the correct Ruby version.

For more information, see github.com/rbenv/rbenv

Installation

To install rbenv and ruby-build on a system with either [Homebrew](#) or git, paste this into your terminal:

```
curl -fsSL https://rbenv.org/install.sh | bash
```

Manuals

- [*rbenv\(1\)*](#)
- [*ruby-build\(1\)*](#)

Thanks

Thank you [Sam Stephenson](#) (the original creator of rbenv) and to hundreds of rbenv and ruby-build contributors ❤️
